

Software Tool House Inc

Live ITSM Migration using Meta-Update®

Ben Chernys

Outline

2

- ITSM Migrations: Difficult; No Tools
- How Meta-Update® Handles Migrations
- Meta-Update® Benefits
- Sample Migration (Background, Live Demo)
- A look at Meta-Update® Scripting
- More Information

Objectives/Results

3

- Objectives
 - Learn what's involved in an ITSM 6 to 7 data migration
 - Learn how Meta-Update® facilitates all requirements for a successful data migration
- Results
 - A live ITSM 6 to 7 migration will be demonstrated
- Skills developed
 - An introduction to Meta-Update® scripting

ITSM Data Challenges

4

□ The ITSM 7 Suite contains:

- **1,800** **Forms**
- **25,000** **Active Links**
- **8,000** **Filters**
- **500** **Join Forms**

Data is represented by a complex web of differently related records and tables.

Reference fields and tables are completely undocumented.

ITSM Data Challenges

5

□ The ITSM 7.6 Suite contains:

➤	2700	Forms	1,800
➤	36,000	Active Links	25,000
➤	18,000	Filters	8,000
➤	800	Join Forms	500

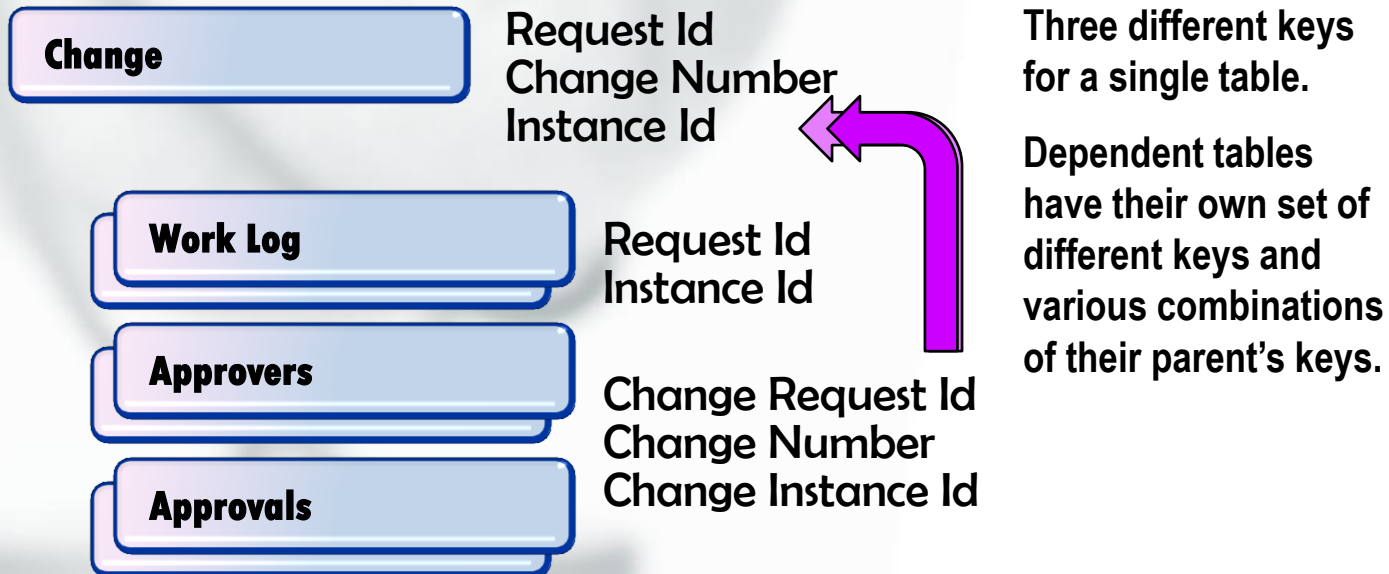

Data is represented by a complex web of differently related records and tables.

Reference fields and tables are completely undocumented.

ARS Data Challenges

6

- All ARS Applications represent “Requests” by trees of data records.
- Records in different forms are connected by referencing data in those records.

ITSM Data Challenges

7

□ Support Staff Example

A symbolic name must be looked up and the new ID reference assigned.

ITSM Data Challenges

8

Migrating data across environments

- Once Foundation Data changes are developed and tested there is no sure way to extract these changes and merge them **correctly** on a different server.

Migrating data across ITSM releases

- ITSM release changes are significant undertakings. The conventional advise is to **not** migrate data because of the difficulty in automating data cleansing and migration into mismatching schemas and field sets.

Automating Imports, Customer On-boarding

- Can be a complex, time consuming, expensive ARS or ITSM development task using staging forms and merge workflow.

Challenges in Migrating to ITSM 7

9

Data cleansing

- ITSM data is validated. Addresses and model names for example, need to be looked up against other defining tables. There is no tool that allows you to automate validation and transformation rules.

Dissimilar Data Schema

- Completely different and more complex table structure in ITSM 7. Diary fields need be converted to records. Attachments must be moved. Completely different Company, Person, Support, Groups, Rights, in short, Foundation Data structures.

Following chains of related records

- A primary cause of difficulties with any extract, import, report, validation - *any data operation*, on a complex tree of data.

Ways of Automating Migrations

10

ARS Import Export

Manual exports to CSVs, Excel to change values, manual imports.

Automated with staging forms and import workflow: a time-consuming, expensive Workflow Project.

Template-based Products

Must use supplied templates.

Can't use your own or handle different sources. Manual validation and firing.

Automated with staging forms and import workflow.

Panacea Migrator DSO AIE

Automated with complex Merge workflow.

May require changes to application.

Workflow Project can approach API costs.

API Perl Java c

Sure way to automate.

Expensive and slow to develop.

Usually needs outside, non-Remedy staff.

SQL

Dangerous to the integrity of the ARS system data.

Expensive and slow to develop.

Usually needs outside, non-Remedy staff.

Meta-Update Migration Automating

11

Scripting Tool

Meta-Update reads a simple ASCII script file, and performs your functions through the API. Replete with look-ups, value transforms, file facilities, messaging and error handling.

No Server Changes No Workflow

No server changes at all.
No staging forms and complex Merge workflow.
No changes to OOTB applications.

No API Needed

No API programmers.
No time-consuming, expensive, frustrating development projects.
Your ARS staff easily implement any automation.

Any Sources

Handle CSVs of any type – even with line feeds.
Handle your own developed templates.
Apply automatic value transforms.
Use CSVs as Look Ups.

Efforts Costs Time

ROI is typically its first use.
Reduce efforts and time to delivery by an order of magnitude.

Comparison of Automation Costs

12

➤ ITSM 6 to ITSM 7 Migration

Based on estimates for an unrealized migration, a real migration implemented with Meta-Update, and an inadequate partial migration implemented with ARS facilities.

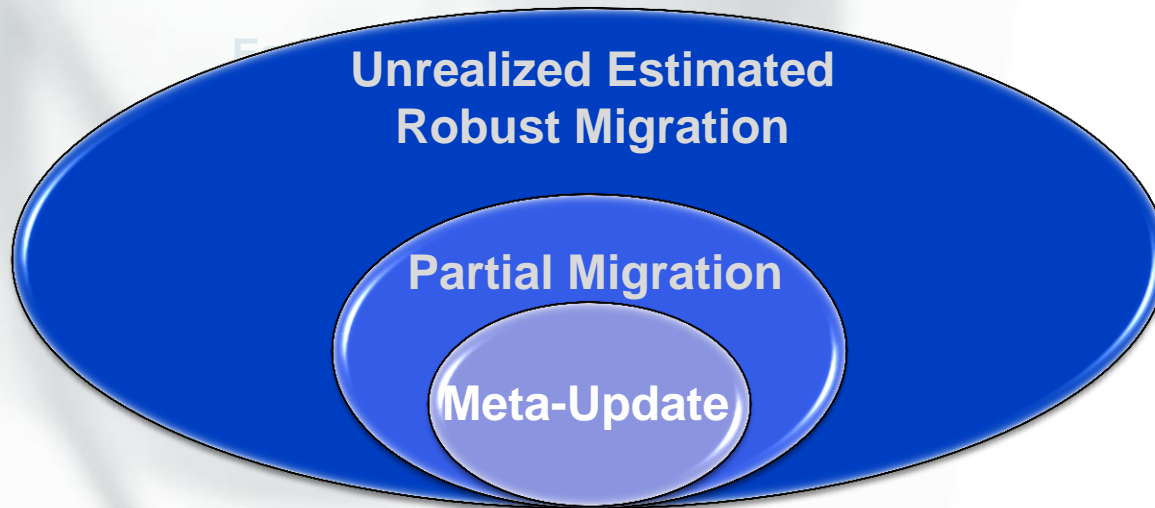

Note that conversion of Diary entries into Work Logs is not possible without Meta-Update or the ARS API.

	Partial Migration	Estimated Migration	Meta-Update
Months	7	24	3

Comparison of Automation Costs

Demo of a ITSM 6 to 7.6 Migration

15

15

Demo: ITSM 6 to 7.6 Migration

16

- We'll now move to the Demo part of the presentation
- We'll start by showing you a running ITSM 6 server and a partially migrated 7.6.03 ITSM Suite
- We'll run the Help Desk to Incident script in debug mode with an editor open to walk through a bit of it
- We'll let it run to completion and examine the results with the User tool

ITSM 6: HD 8: Requester Profile

18

The screenshot displays the Remedy IT Service Management interface. At the top, a 'Help Desk Cases - Matching' table lists several cases. Below this, the 'Help Desk Case' details are shown, including Summary, Description, Category, Type, and Item. A 'Person Information' window is open, showing fields for Login, Last Name, Support Staff?, ID, First Name, Type, Status, Full Name, Training, Manager?, Notification Method, Region, Office, Email Address, Site, Manager's Name+, Phone Number, Department, Web Page, Fax Number, and a list of the requester's cases.

ITSM 6: Attachments Added

23

The screenshot displays the 'Help Desk Case (Modify)' window in Remedy IT Service Management. The window title is 'Help Desk Case (Modify)'. Below the title bar, there is a section for 'Help Desk Cases - Matching' with a search icon and a timer showing '0:00'. This section contains a table with the following data:

Case ID+	Priority*	Status*	Category*	Type*	Item*	Summary*
HD00000000000008	Low	Closed	Facilities	Ergonomics	Assessment	I need an erg...
HD00000000000009	Medium	Closed	IT Services	Account Administration	IP Assignment Or Change	Need an IP...
HD00000000000010	High	Closed	Networking	Access to Files/Drives	Permissions	Error when c...
HD00000000000013	Low	Closed	Software	Other	Report Writer	Error using r...
HD00000000000015	Medium	Closed	Networking	Access to Files/Drives	Configuration	Cannot map...
HD00000000000016	Low	Closed	Facilities	Furniture/Accessories	Chair	need quest...

Below the table, the 'Remedy IT Service Management for the Enterprise' logo is visible. The main section is titled 'Help Desk Case' and contains various fields for case details:

- Summary***: I need an ergonomic assessment.
- Description***: I am having back pain and ...
- Category***: Facilities
- Type***: Ergonomics
- Item***: Assessment
- Case ID+**: HD00000000000008
- Group+**: Facilities
- Individual+**: Felix Fac
- Request Impact**: Low
- Case Type***: Incident
- Status***: Closed
- Pending**: (empty)
- Closure Code**: Automatically Closed
- Escalated?**: No
- Priority***: Low

There is an 'Auto-ReAssign' checkbox which is currently unchecked. Below the case details, there are tabs for 'Requester Information', 'Activity', 'Duplicates', 'Solutions', 'Tasks', 'SLAs', 'Related Items', 'Problem Management', and 'Attachments'. The 'Attachments' tab is selected, showing a table of attached files:

File Name	Size	Attach...
*CI-Src...	200 KB	Attach...
*CTI-xl...	379 KB	Attach...
CTI-xl...	16 KB	Attach...

At the bottom of the window, there are buttons for 'Save', 'Print Case', 'Reports', 'Bulletin Board', 'Reminders', 'Create Problem', and 'Close'. A 'Help' link is also present.

23

ITSM 6: Notes Diary

24

The screenshot displays the Remedy IT Service Center interface. At the top, a table titled "Help Desk Cases - Matching" lists several cases. Below this, the "Help Desk Case" details for case ID HD00000000000008 are shown, including fields for Summary, Description, Category, Type, and Item. A "Work Log" window is open over the case details, showing a "Diary History" with three entries: a site appointment on 20/09/2002, a completed assessment on 21/09/2002, and an automatic closure on 29/10/2002. The "Diary Editor" section is currently empty. The interface includes navigation tabs like "Requester Information", "Activity", "Duplicates", and "Solution", as well as buttons for "Save", "Print Case", "Reports", and "Bulletin Board".

```

The screenshot shows a window titled "Work Info (itsm7rtm) -- Notes" with a menu bar containing "File" and "Edit". The main content area contains the following text:

The ticket's original ITSM 6 requester with login "Erica Engineer" was not found in the ITSM 7.0 CTM:People table

Login: Erica Engineer
ID: 0000000000000002
Full Name: Erica Engineer
Last Name: Engineer
First Name: Erica
Telephone: 222-2221
Region: USA
Site: 25 Bay St, Mountain View, CA
Department: Engineering

At the bottom of the window are "OK" and "Can" buttons.

30

Conclusion

31

- Meta-Update is the only tool available to automate the value transformations and the ability to follow chains of records needed to perform a complete data migration from prior releases of ITSM or from differing on-boarding data structures.
